

azure **costs** for Cloud Solution Providers

Azure costs is an easy and comfortable way to analyse and manage all azure cloud costs in one place. All azure cloud costs are processed into clear and accessible reports to monitor and understand pay as you go spendings. All reports are optimized to identify cost drivers and under-utilized resources which helps to leverage cost saving potentials.

Nowadays companies are using modern scalable cloud infrastructures with a pay as you go model. This model has no limitations in the amount of usable cloud computing resources.

As a result, these scalable resources often run longer than needed, producing lots of unnecessary costs. The azure cost monitor solves this problem by giving companies a simple to use cost control center.

Organizations gain the ability to see all of their cloud costs centrally and to act upon those facts. This gives every company the freedom to put spending decisions in the hand of their engineers, admins or developers and provide transparency to every stakeholder in the company.
